

Module:	Elective Advanced Lectures: Theoretical Physics
----------------	--

Module No.: physics70c

Course:		Quantum chaos: tools and applications (T)
----------------	---	--

Course No.: physics7517

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	2+1	5	WT

Requirements for Participation:**Preparation:**

Classical mechanics, Quantum mechanics, Statistical mechanics (recommended). Special interest in quantum dynamics and nonlinear systems.

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Knowledge on the theory of chaos, tools to analyze it in quantum systems with examples, as well as its manifestation in many-body systems that can be realized on the experimental platforms.

Contents of the Course:

1. Introduction and classification of dynamical systems
 - From macroscopic, mesoscopic to microscopic systems, Different dynamics: simple to complex.
2. Chaos in classical systems
 - Discrete dynamical system: One dimensional maps
 - Hamiltonian systems: Phase space and Hamilton's equation
 - Poincare map
 - Stroboscopic Maps of Periodically Driven Systems: Kicked rotor
 - KAM theorem
 - Lyapunov exponent, Kolmogorov-Sinai entropy
3. Aspects of quantum chaos
 - Quantum classical correspondence
 - EBK quantization
 - Gutzwiller's Trace formula
 - Phase space densities and Wigner function
 - Anderson and dynamical localization
4. Level statistics: Application of Random Matrix Theory
 - Gaussian Ensembles of Hermitian Matrices
 - Level Spacing Distributions
 - Unfolding Spectra
 - Eigenvector statistics
 - Dyson's Brownian-Motion Model

5. Quantum chaos and ergodicity in many-body systems

- Quantum butterfly effect
- Out-of-time-ordered correlator (OTOC)
- Ergodicity and quantum scar
- Example from collective quantum systems: Dicke model, Josephson junction

Recommended Literature:
