

Modules:

physics700 **Elective Advanced Lectures**
 physics730 **Theoretical Physics**

Course:**Topology for Physicists (T)**

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	ST

Requirements:**Preparation:**

Bachelor of physics or mathematics; the basics of exterior calculus are assumed

Form of Testing and Examination:

Written or oral examination

Length of Course:

1 semester

Aims of the Course:

This course gives an introduction to various topological concepts and results that play an important role in modern theoretical physics.

Contents of the Course:

Elements of homotopy theory: homeomorphic spaces, homotopic maps, fundamental group, covering spaces, homotopy groups, long exact homotopy sequence of a fibration

Homology and cohomology: Poincaré lemma, Mayer-Vietoris sequence, Čech-deRham complex, Hurewicz isomorphism theorem, spectral sequences

Vector bundles and characteristic classes: Euler form, Thom isomorphism, Chern classes

Applications: Berry phase; Dirac monopole problem; visualization of closed differential forms by Poincaré duality; cohomology of electrical conductance; supersymmetry and Morse theory; index theorems; homotopy classification of topological insulators

Recommended Literature:
