Module:

Elective Advanced Lectures:

BCGS Courses

Module No.: physics70d

Course:

Magnetism (E/A)

Course No.:

Category	Туре	Language	Teaching hours	СР	Semester
Elective	Lecture	English	2	3	WT

Requirements for Participation:

Preparation:

Basic knowledge in condensed matter physics

Form of Testing and Examination: Oral examination

Length of Course: 1 semester

Aims of the Course:

Understanding of magnetism in condensed matter systems

Contents of the Course:

The lecture introduces to the magnetism in condensed matter systems. Starting from basic concepts of the magnetic properties of free atoms it is aimed to illustrate the extremely rich field of collective magnetism that arises from the mutual interaction of an extremely large number of interacting particles. Topics covered are

Magnetism of free atoms Magnetism of ions in the crystal electric field Magnetic interactions and ordering phenomena Magnetic ground states and excitations Itinerant magnetism Magnetic frustration and low dimensionality Magnetic order vs. competing ordering phenomena

Recommended Literature:

Skriptum (available during the course) S. Blundell, Magnetism in Condensed Matter Ashcroft/Mermin, Solid State Physics Kittel, Festkörperphysik
